

Do you want your work to have real impact? Do you wish to directly contribute to the conception and implementation of highly innovative software solutions?

VMRay is an early stage information security company in Bochum, Germany. We develop innovative solutions and new technologies based on the latest academic research for automated malware analysis and threat detection. Our solutions are used by government and enterprise customers around the globe, above all in North America. We regularly present at the top international conferences such as RSA or Blackhat. To support our growth and expand our team we are hiring a

SYSTEM INTEGRATION ENGINEER

for full-time employment at our headquarters in Bochum.
Reference: **VMR-W-01/17**

.....

We are a small, international team of 20 people working together in Bochum, Germany. We offer modern and quiet workplaces instead of open-plan offices. Everybody arranges his working hours flexibly. At VMRay you will not be just a little cog in a big wheel. Instead, you will contribute to the conception and implementation of our products and solutions. Our technology and the problems we are solving with it are of high complexity. This is why our work is very challenging and it demands maximum concentration and expertise. Many interesting customers and individual applications reward our efforts with exciting and varied work.

We are not just sitting in a professional Ivory Tower but meet regularly with IT security experts from all over the world. We present our products at international conferences and give speeches at invite-only hacker workshops.

Please send your application documents (including reference number and salary expectations) as pdf version by email only to jobs@vmray.com!

We'll consider qualified applicants from other regions and offer relocation assistance.

RESPONSIBILITIES

- Integrate our malware analysis system with external data sources such as network and security management technology (SIEM, EDR, email/ web gateways, NGFW, TIP, etc.)
- Investigate relevant solutions and identify integration requirements in close discussions with our customers
- Setup and operate local test environments for your integrations

SKILLS & REQUIREMENTS

- Hands-on experience in the use of at least one relevant technology (SIEM, EDR, email/web gateways, NGFW, TIP, etc.)
- Proficient with web service technologies (REST, XML, JSON, SOAP, etc.)
- Proficient with database technologies (SQL, NoSQL, SPL, etc.)
- Proficient with Python programming or at least one similar high-level programming language
- Strong communication skills and desire to interact with customers on a technical level
